

## Diving and sub sea activities

Utilising the latest in diving equipment and technology, our versatile diving division has the capability to operate in any subsea environment from inshore shore-based tasks to offshore diving operations.

Our highly trained divers are provided with the best possible tools to complete the task at hand. We use only the latest Kirby Morgan surface supply equipment coupled with a variety of breathing gas options ranging from regular air to more technical nitrox and trimix gasses. These complex gas mixes allow us to operate safely to a depth of 50m (164 feet.)

We keep two new state-of-the-art de-compression chambers which allow divers to decompress on the surface rather than the in the sea; a far safer and time efficient process.

We call upon a range of Dive

Support Vessels (DSV) each offering a tailored solution to meet our specific requirements. Our diving capabilities are broad and include;

- Installation
- Rigging
- Demolition
- Burning
- Welding
- Survey/Inspection
- Non Destructive Testing

Our unique mobilisation process allows us to call upon a pool of dedicated and experienced commercial divers and supervisors.

Our quayside location in Esbjerg allows Diving teams to be operational at short notice to conduct a wide range of sub-surface tasks.

Our QHSE department is trained sub sea experience and clients demands.
