

## Offshore Wind - Service Installation and Repair

We offer service, installation and repair work from the seabed up. The challenging tasks of the offshore industry are everyday work for us.

Mobilize us when you need work done in hard-to-reach places like under water, in splash zones or at height. We provide on-call service.

We perform project specific activities, e.g. installation or repairs, planned inspection and maintenance.

Working successfully offshore is all about planning and training.

We have plenty of hands-on experience and apply it in development, design and calculation disciplines. Our teams are involved from start-up to hand-over, service and maintenance.

Quality, Health, Safety and Environment are given the highest

priority in every aspect of our work. Our DNV certified Quality Management System, ISO 9001 & 3834-2 guarantees this, including our commitment to the requirements of OHSAS 18001.
