

Real-Time Planning of Production

By simply pressing on one button we acknowledge a quotation and change status to order; - the first step into production planning is initiated.

On our quotations we have itemized order lines with unique item ID. We ensure proper traceability during the production stages.

We save and store each order / project electronically. We are able to provide urgent and top level service. The real-time planning, combined with history log, make it possible to reply promptly.

In case of re-order, emergency orders or order for spare parts. We are able to assist.

The system works with active and real-time indicators to ensure planning within agreed delivery and order deadlines.

The daily working activities are supported by our built in QA system (Quality Assurance), as Job Card and Manufacturing Specification are incorporated.

- Electronic Work Process System
- Level 1, 2 and 3 Job Card
- Manufacturing Specification (Step-by-Step)
- Real-Time Planning
- Fault indicator
- Order and finance module incorporated
- Production Forecast
- Active Planning system – with drag and drop functionalities.
