

Offshore Handling Flex Crane

We offer the handling of heavy and complex equipment in an efficient, safe and profitable manner e.g.; WTG spare parts, blade inspection/repair, structures, etc.

We can for instance, lift three tons SWL, from a typical working or transfer vessel, whilst it is safely in the boat landing.

The handling is done by a special flexible crane jib developed by SubCPartner (patent pending.PA 2010 70226).

The flexible crane can be assembled in a few hours. Each part can be lifted onto the platform with a small David crane.

Substantial savings can be achieved by using this crane solution, rather than doing lifting operations with a crane on a larger vessel or jack-up.
