

Process Module - EPCI

- Detailed Engineering
- Procurement
- Construction
- Installation of:
 - Process
 - Electrical
 - Instruments
- As built documentation

SubC Partner was assigned the contract for fabricating the structural steel for the TRYM module in January 2010 by Maersk Oil. The fabrication was a success and the contract was increased to include erection of supports, spools, equipment and E&I.

The Module was shipped out directly from SubC Partners facilities in July 2010 according to schedule.

The project was performed in close cooperation with the client to fulfil the tight schedule. The Module was delivered with full documentation and an unconditional release note from DNV.

The project has been planned in detail from start to finish and the reason for the success is mainly due to professional project management and planning.

The TRYM module is placed on the existing Maersk production platform; Harald. The module is handling the oil & gas produced at the TRYM field situated in the Norwegian part of the North Sea.
